

PRINT DRIVER SYSTEM AND METHOD FOR PRINT JOB NOTIFICATION

ABSTRACT OF THE INVENTION

5 A print driver system and method are provided for print job
notification. The method comprises: accepting a document at a print
driver; presenting a user interface (UI) for accepting print job commands,
such as the selection of a printer; presenting a UI for receiving notification
commands, such as a text message of email address; sending the
10 document for printing in response to the print job commands; and,
sending a print job notification to an email address, in response to sending
the document for printing. The print job notification can be for the
purpose of reporting errors, a completed print job, the identity of the
selected printer, or instructions to be carried out regarding the completed
15 print job.
